1. Identify a part of a real-world object where you see each mathematical object.

a. line segment _______________________________________

b. ray  _______________________________________

c. point  _______________________________________

2. How many line segments does the figure have? Explain.

3. Draw a figure that has 1 pair of parallel sides and exactly 2 pairs of perpendicular sides, and another figure that has 1 pair of parallel sides and exactly 3 pairs of perpendicular sides.
