1. A manufacturer made 7,234 boxes of coffee stirrers. Each box contains 1,000 stirrers. How many stirrers did they make?

2. An assistant principal bought 480 student planners for the school. If there are 10 planners in each box, how many boxes did he buy?

3. There are 100 packages of sugar on the display case at the supermarket, and each package holds 454 grams of sugar. How many total grams of sugar are there in the display case?

4. A microscope has a setting that magnifies an object so that it appears 100 times as large when viewed through the eyepiece. If a tiny insect is 0.095 centimeter long, how many centimeters long does the insect appear through the microscope?

5. Ten polar bears live at the zoo. In one week, they eat 373.2 pounds of food all together. If each bear eats the same amount of food, how much food does one bear eat in a week?

6. Jack and Kevin make a mosaic for art class by using fragments of broken tiles. They want the mosaic to have 100 sections. If each section requires 31.5 tiles, how many tiles do they need to complete the mosaic?
